VESPA includes 18 contributing participants (labs) in 13 beneficiary institutes:

Observatoire de Paris
(IMCCE, LESIA)

IAPS/INAF Rome

Jacobs Univ. Bremen

CNRS
(IRAP IPAG LATMOS
GEOPS CDS)

IWF Graz

IASB-BIRA Brussels

UCL London

IAP Prague

+ Contributions from
the community

UPV/EHU Bilbao

IGN/PAS Wrocław

Univ. Bern

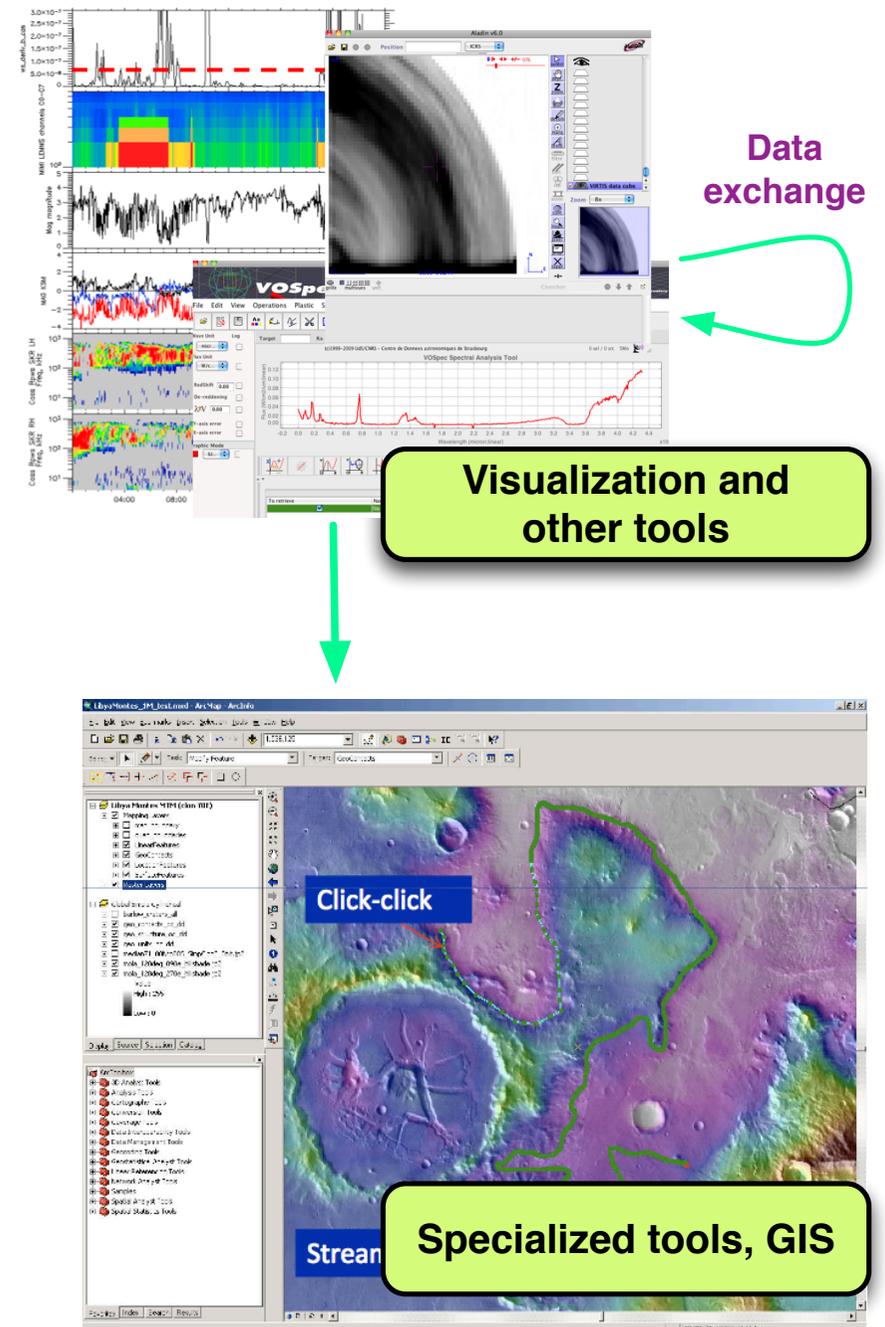

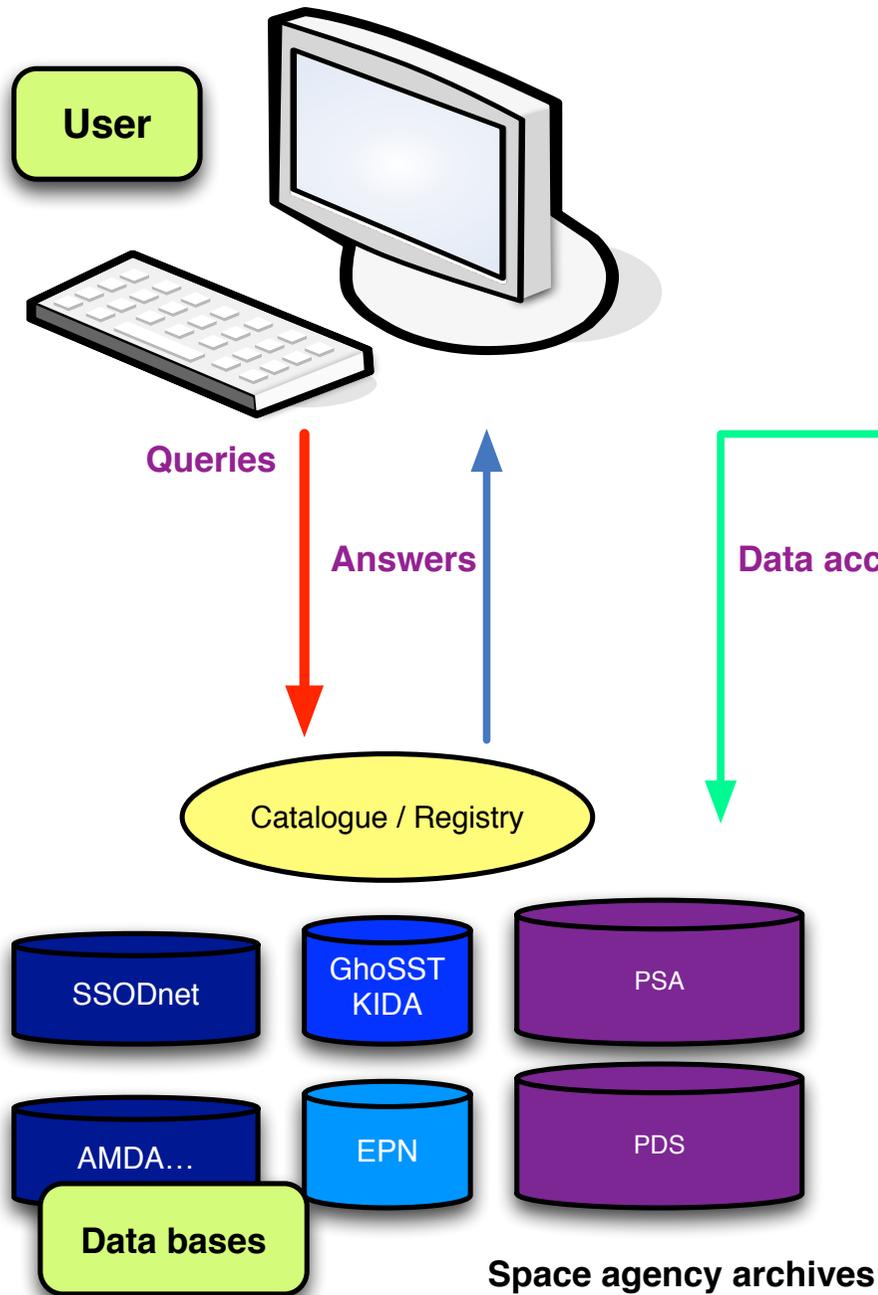

SINP/Lomonosov Univ.

GFI Toulouse

User's experience

Such a system has been designed already:

=> Infrastructure adapted from the Astronomy Virtual Observatory

A set of standards to describe data contents, identify them in sparse archives, and retrieve them

+ tools able to plot, analyze, exchange, and combine the data

VESPA uses this infrastructure to provide:

- **An easy way to search in Planetary Science databases based on physical / observational parameters**
- **A consistent way to search many databases at once**
- **A straightforward interface to access VO tools for Planetary Science**

=> Access to many data for researchers

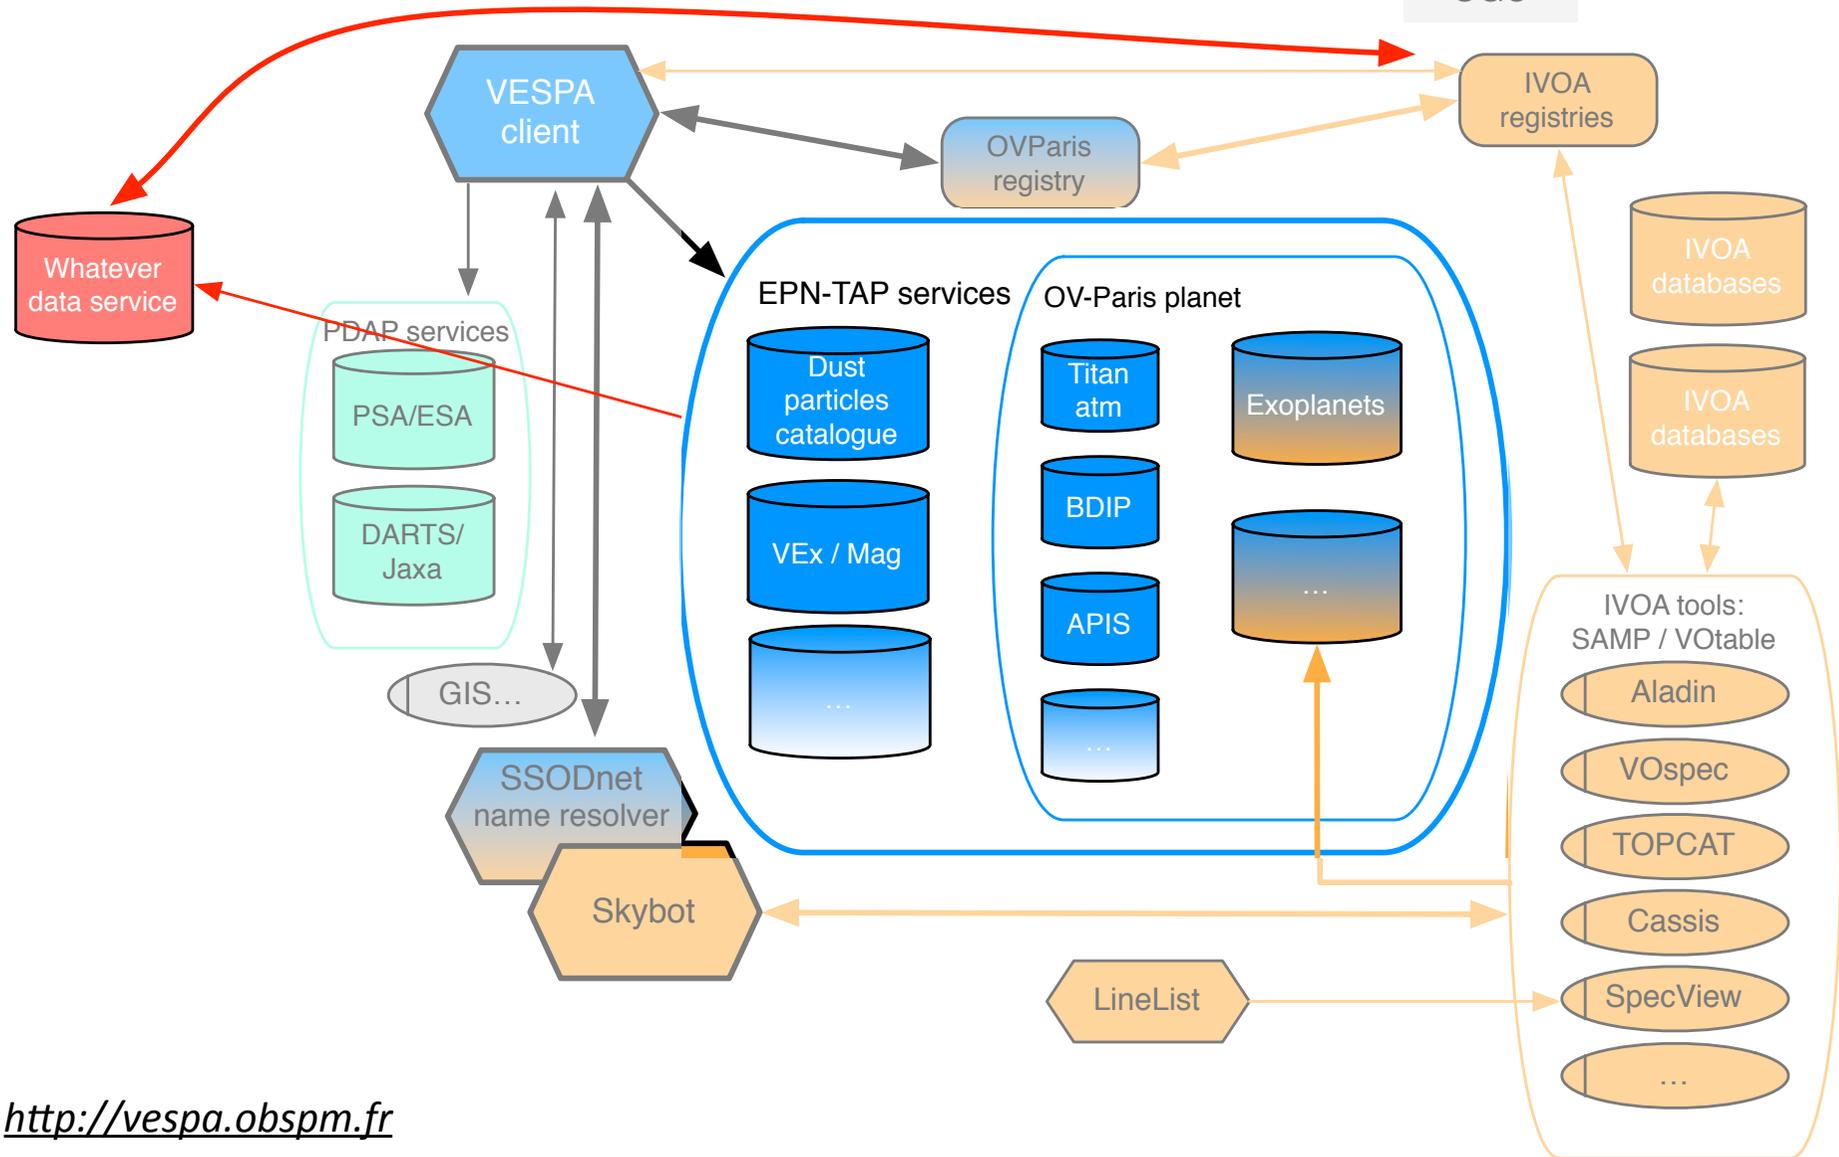

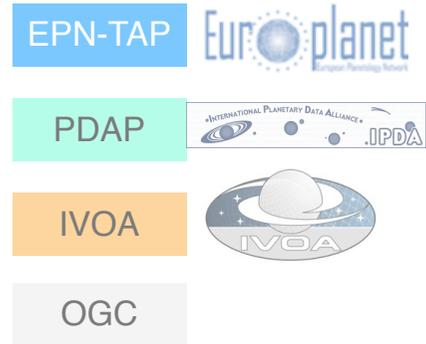

=> Major exposition for data providers

A Virtual Observatory in Planetary Science

Built on astronomical VO developments

+ previous European programs: IMPEX, HELIO, VAMDC...

+ interfaces with: PDS, GIS/OGC, etc...

VESPA infrastructure:

Open data / open source system:

- **A data model: EPNCore**
- **A data access protocol: EPN-TAP**
- **An optimized search client: the VESPA portal**
 - Other search modes: through standard TAP clients & in VO tools
- **Connexion to VO tools: through the SAMP exchange protocol**
 - Connexion to other, non-VO tools: developing SAMP plug-ins
- **Relies on existing standards**
 - In particular IAU + responsive to IVOA & IPDA std
- **Data services are widespread, connected via EPN-TAP**
 - no central system - except the registry

VESPA data access

- Global search interface for Planetary Science services
- Supports EPN-TAP + PDAP

<http://vespa.obspm.fr>

The screenshot displays the VESPA web interface. At the top, there is a navigation bar with 'All VO', 'Custom resource', 'Direct Query', and 'Advanced Query' options. Below this, a search bar shows 'apis' with 15506 results and 'bdip' with 704 results. The main content area is titled 'Results in service apis' and features a table of search results. A blue arrow points from the table to a box containing the text 'To plot / analysis tools'. On the right side, there are sections for 'Plotting tools' (listing TOPCAT, Aladin, SPLAT, and CASSIS) and 'Example queries' (showing a plot of Saturn in March 2012).

To plot / analysis tools

Plotting tools

- TOPCAT
- Aladin
- SPLAT
- CASSIS

Example queries

Saturn in March 2012

Data services connected via EPN-TAP

Currently:

39 interoperable data services connected, from 13 institutes (~ 15 in dev)

Encompass many aspects of Solar System studies:

- surfaces
- small bodies / satellites / rings / dynamics
- atmospheres
- magnetospheres / radio observations
- solar physics / planetary plasmas
- exoplanets
- solid spectroscopy / experimental reference data

Several high-quality amateur services preselected (PVOL, RadioJove...)

Data services connected via EPN-TAP / field

Open
Open in test
In development
Being studied

* New in 2016-18

Atmospheres

- Titan profiles - CIRS (Cassini, LESIA)
- Venus spectroscopy - VIRTIS (VEx, LESIA)
- * - Mars Climate Database (modeling, LMD-LESIA)
- * - Venus profiles - SPICAV/SOIR (VEx, IASB-BIRA)
- * - Mars profiles - SPICAM (MEx, LATMOS)
- All MEx derived atmospheric products (via MEx IDS)
- EuroVenus derived products (via C. Wilson)

PDS3 dataset *
in the PSA

Small bodies

- M4ast (ground based spectroscopy, IMCCE)
- 1P/Halley spectroscopy - (IKS / Vega-1, LESIA)
- BaseCom - (Nançay obs, LESIA)
- * - TNOs are cool - (Herchel & Spitzer + compilation, LESIA & LAM & Utinam)
- Cometary lines catalogue (IAPS)
- Vesta & Ceres spectroscopy - VIR/DAWN (IAPS)
- * DynAstVO: NEO refined parameters (IMCCE)
- * MPCorb: Small bodies orbital cat (MPC/Heidelberg)
- Rosetta ground-based support (via C. Snodgrass)
- * - 67P illumination config (IRAP)

PDS3 dataset
in the PDS

Surfaces

- * - CRISM WMS service (MRO, Jacobs U)
- * - Mars craters (Jacobs U, + update by GEOPS)
- * - USGS planetary maps (Jacobs U)
- * - M3 WMS service (Chandrayaan-1, Jacobs U)
- HRSC data (MEx, Frei Univ)
- OMEGA data (MEx, IAS, via SIttools2)
- MarsSI GIS (Lyon)

Solid spectroscopy

- SSHADE: ices & minerals (IPAG & network)
- Minerals emission db (DLR)
- PDS spectral library (LESIA)
- * - Berlin Reflectance Spectral Lib (DLR)

Derived from a
PDS dataset

Magnetospheres / radio

- APIS (HST, LESIA)
- NDA (Jupiter radio Nançay, LESIA)
- AMDA (CDPP / IRAP)
- MAG data (VEx, IWF Graz)
- MASER & Juno support (LESIA)
- * - RadioJove (LESIA & US amateur network)
- * - Iitate HF data of Jupiter (Tohoku Univ, Jap)
- UTR-2 Juno ground support (Kharkiv, Ukr.)
- MDISC (modeling, UCL)
- Cluster data (IAP, Prague)
- Interface with IMPEX models (IWF Graz)
- * - Hisaki (Tohoku Univ., Jap)
- * - Transplanets (CDPP / IRAP)

JAXA mission

Exoplanets

- Encyclopedia of exoplanets (compilation, LUTH/LESIA)
- Transit observations (Bern)
- Interface with DACE (Geneva)

Solar

- HELIO AR & 1T3 solar features catalogues (LESIA)
- * - Bass2000 (LESIA)
- Radio Solar db (Nançay, LESIA)
- * - CLIMSO (Pic du Midi, IRAP)
- * - Iitate AMATERAS (Tohoku Univ, Jap)

Generic / interdisciplinary

- BDIP (LESIA)
- Planets then satellites characteristics (LESIA/IMCCE)
- * - PVOL (UPV/EHU & amateur network)
- * - Gas absorption cross-sections (Granada)
- Nasa dust catalogue (IAPS)
- Stellar spectra, support for observations & exopl. (LESIA)
- * - Telescopic planetary spectra collection (LESIA)
- Interface with VAMDC (TBD)
- * - PSA complete archive (ESA)
- DARTS (JAXA - currently via PDAP)
- On-going discussions with PDS & IPDA

Favorite VESPA tools

Only some tools are presented here

Favorite ones:

TOPCAT (tables, mutipurpose)

Aladin, DS9 (images/cubes) + **ImageJ, APERICubes...**

CASSIS, SPLAT-VO (spectra) + **VOspec, SpecView**

3Dview, MATISSE (3D visu, shape models) + **Cosmographia**

Autoplot (time series)

Ephemeris related:

Miriade, Vision (in Miriade), **SkyBot, name resolver** (from IMCCE)

Some services include specific tools together with the data:

AMDA, SSHADE... (more and more accessible from outside)

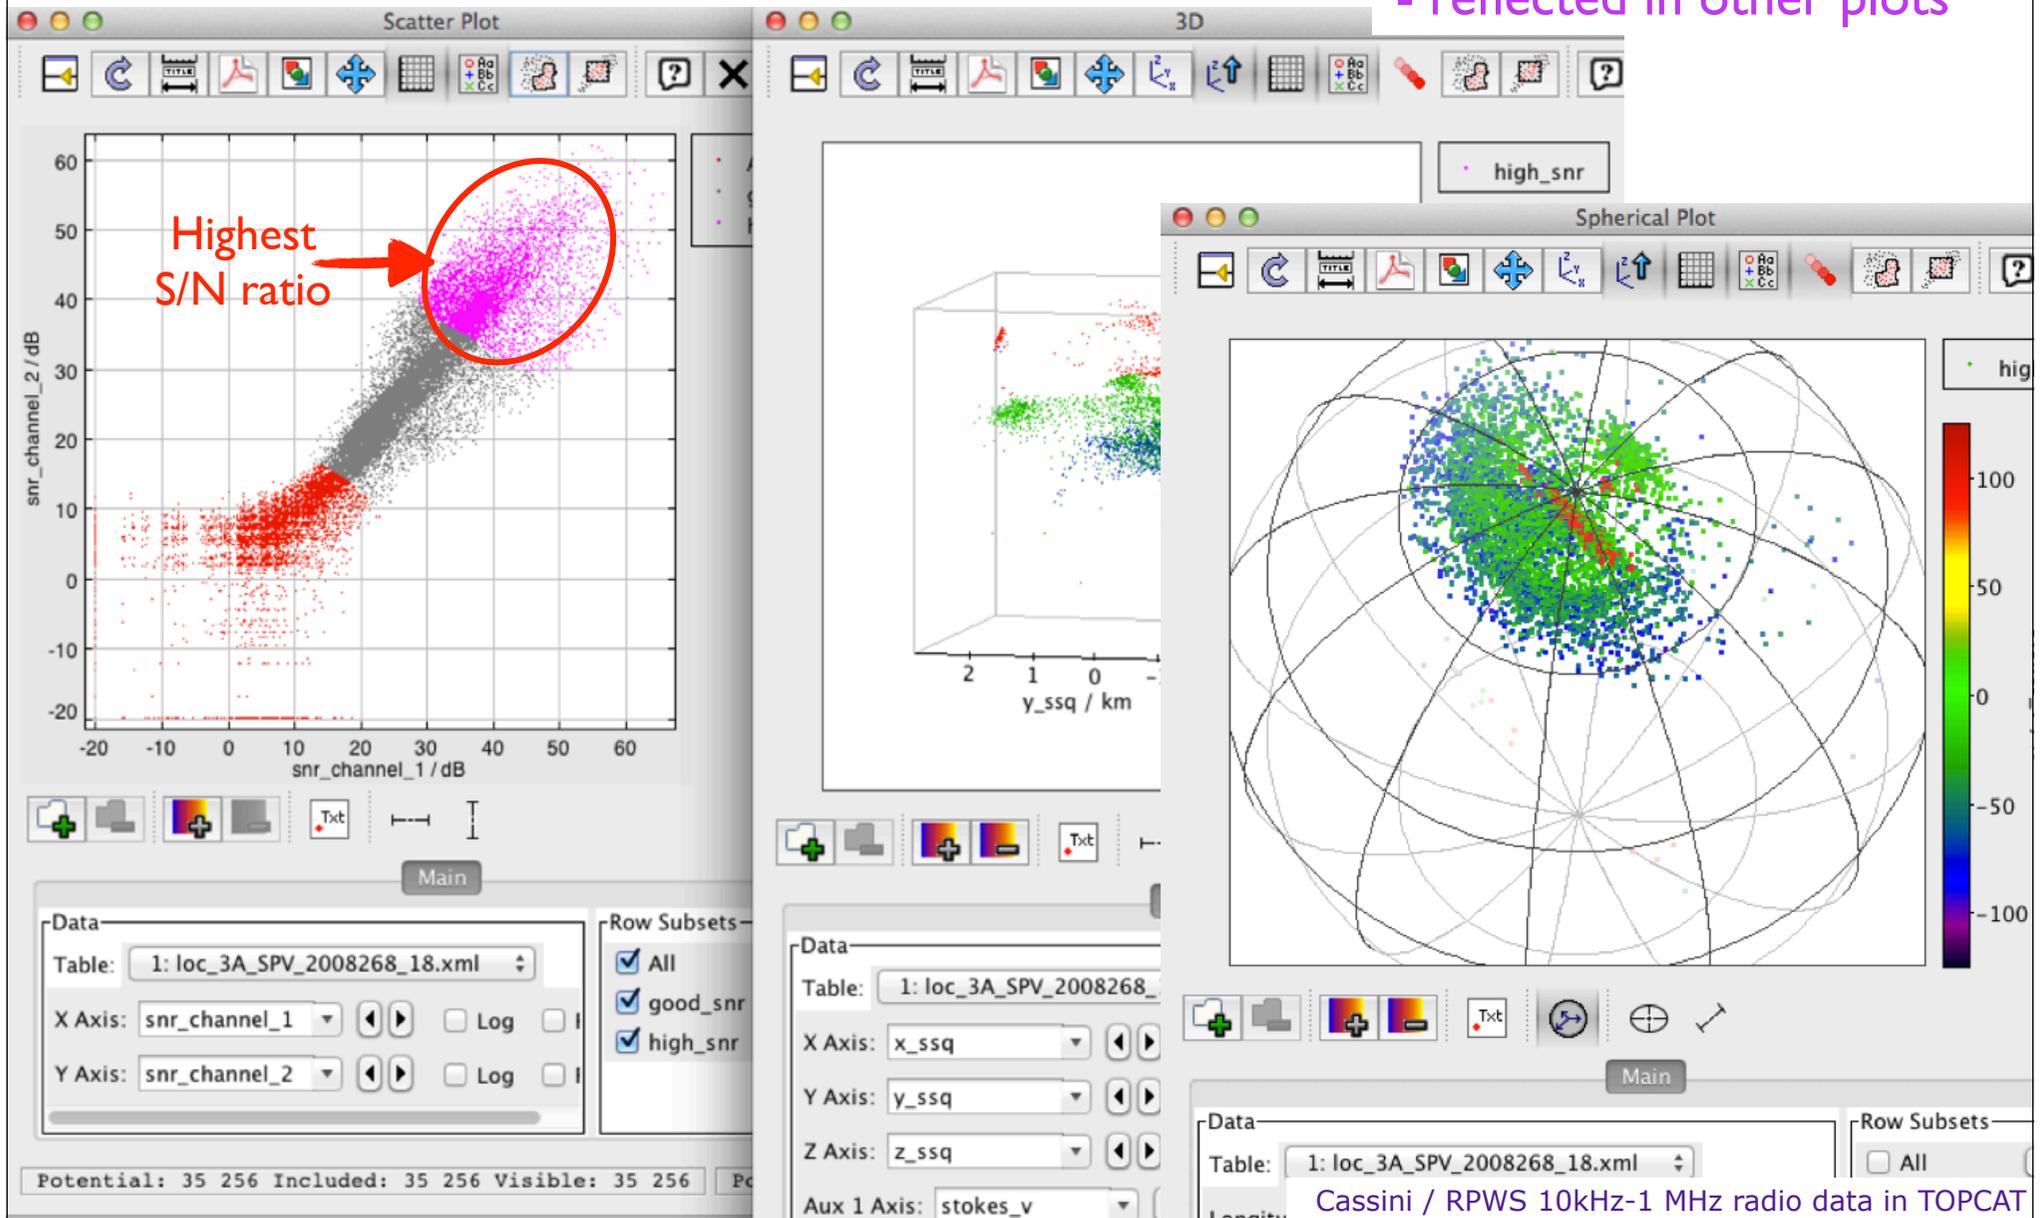

All tools exchange data via the SAMP protocol

Favorite VESPA tools

TOPCAT (Bristol Univ):

Allows data selection

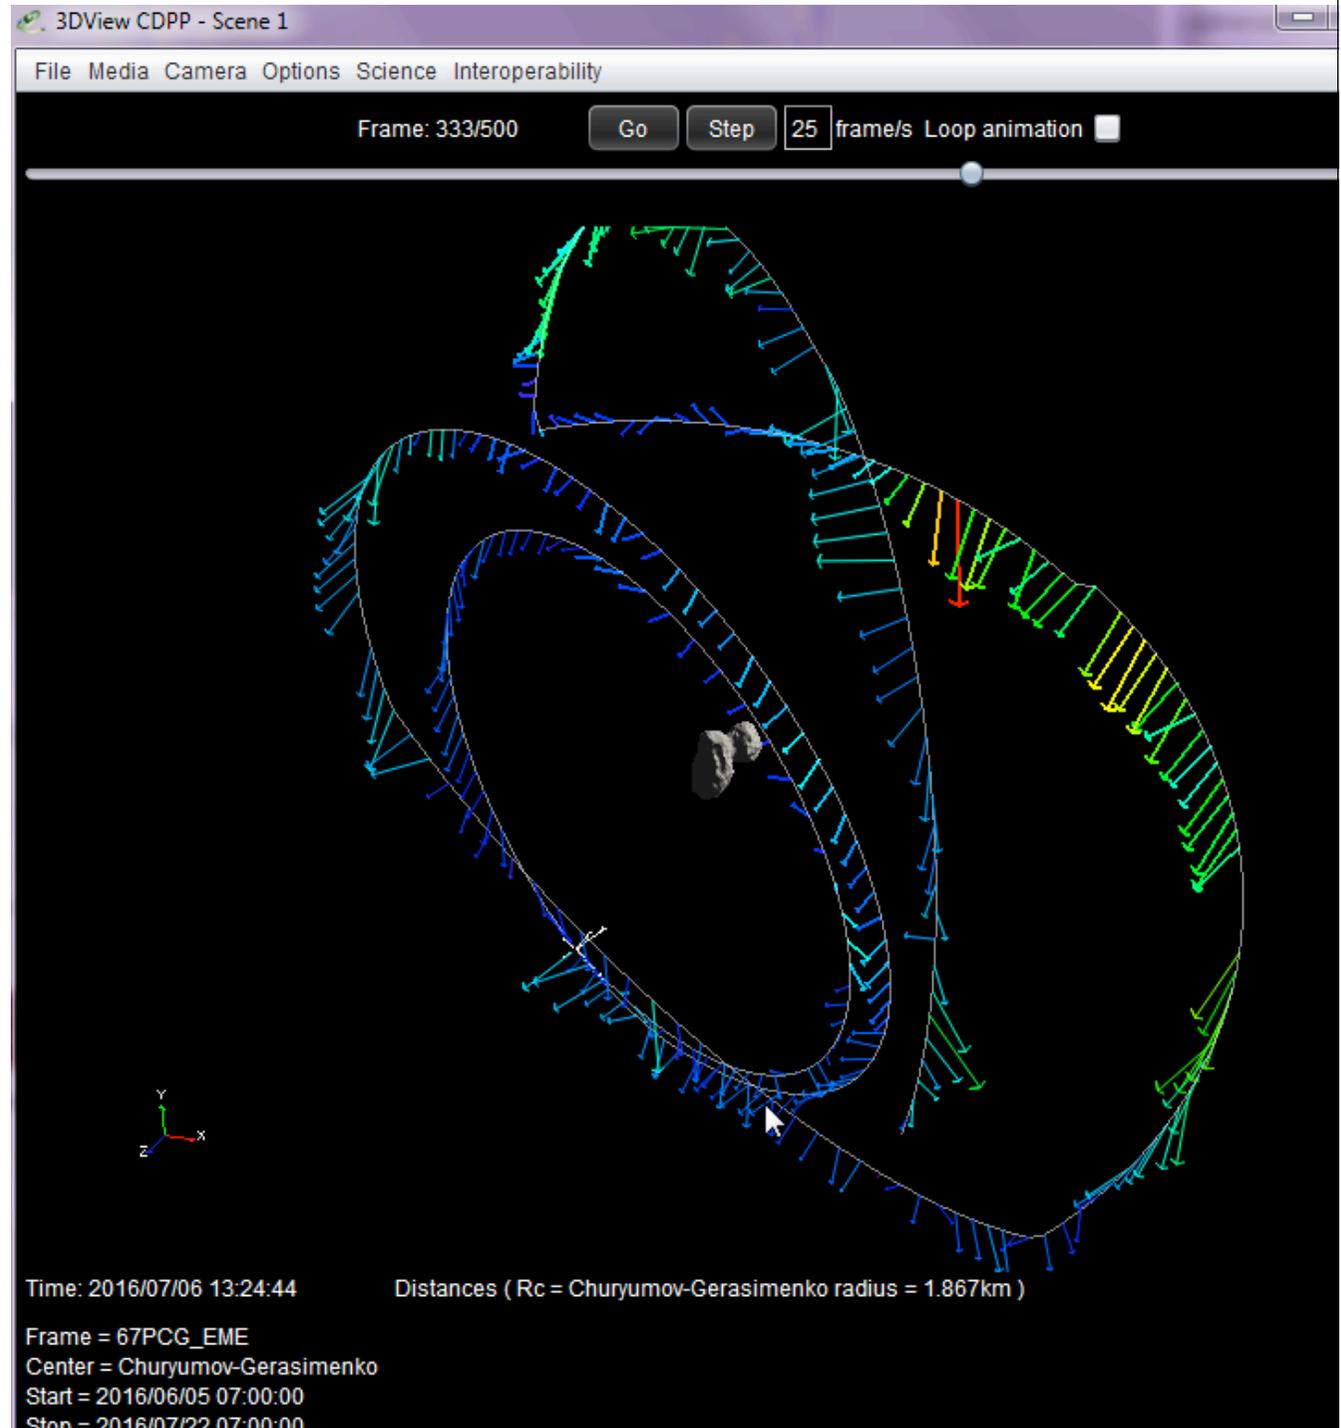

- by formula or graphically
- reflected in other plots

Favorite VESPA tools

3Dview (CNES/IRAP):

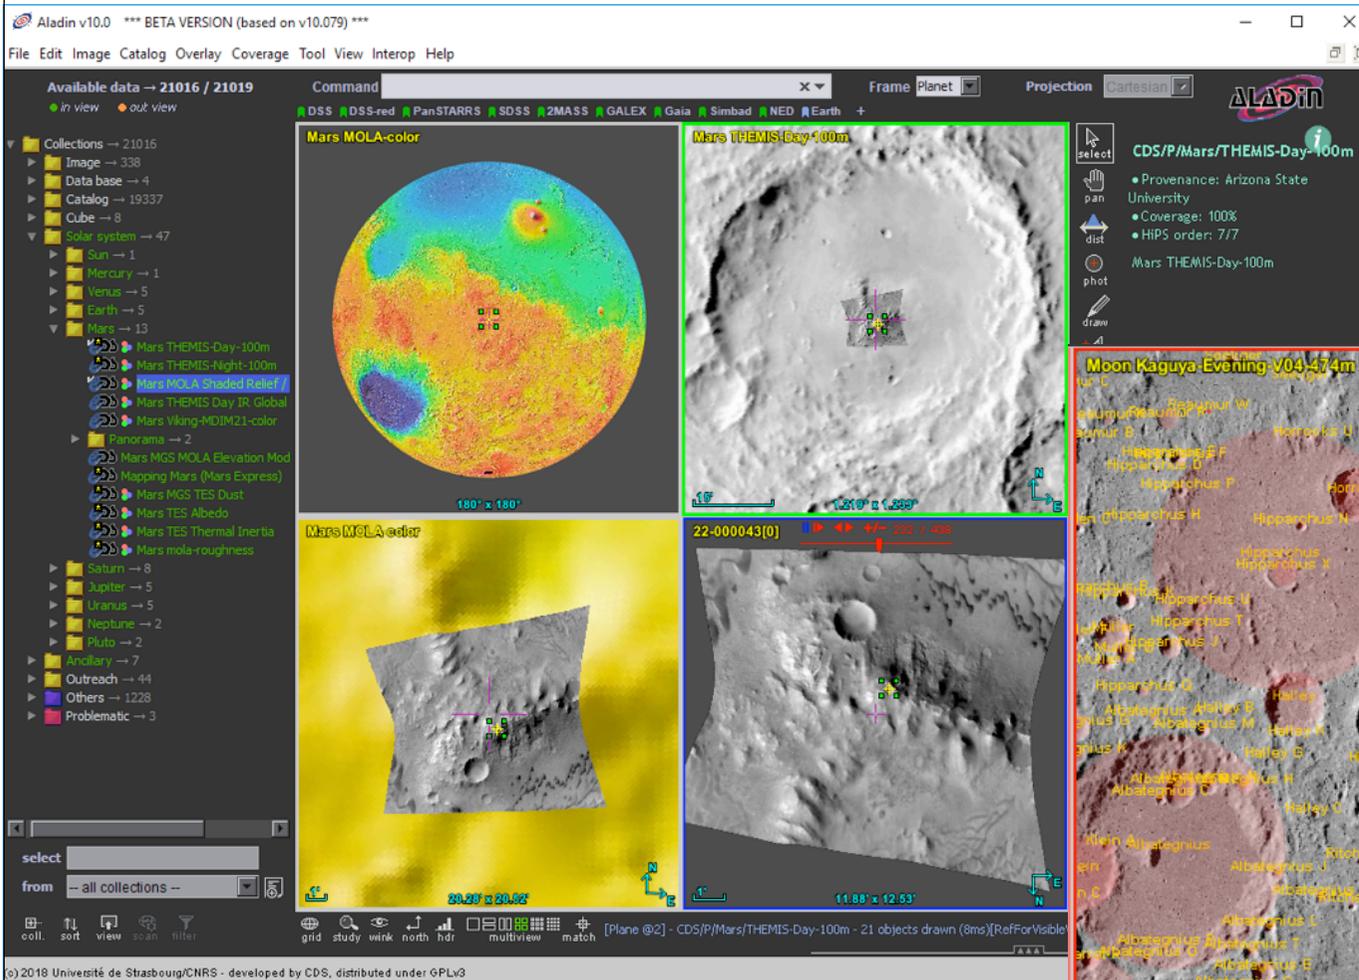

- added Spice kernels from all space missions
- Added image projection capacities

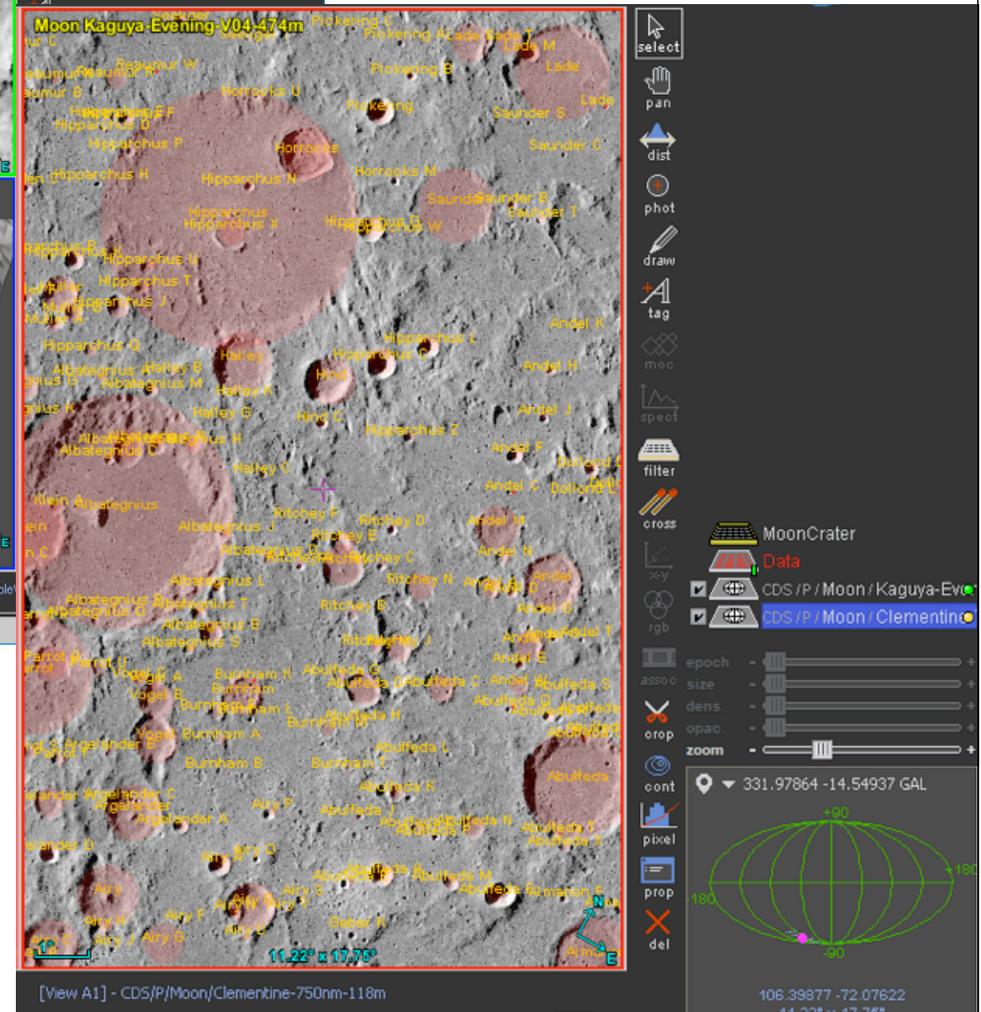

Favorite VESPA tools

Aladin (CDS/CNRS):

Georeferenced images + objects superpositions

Lunar crater catalogue on Kaguya HiPS

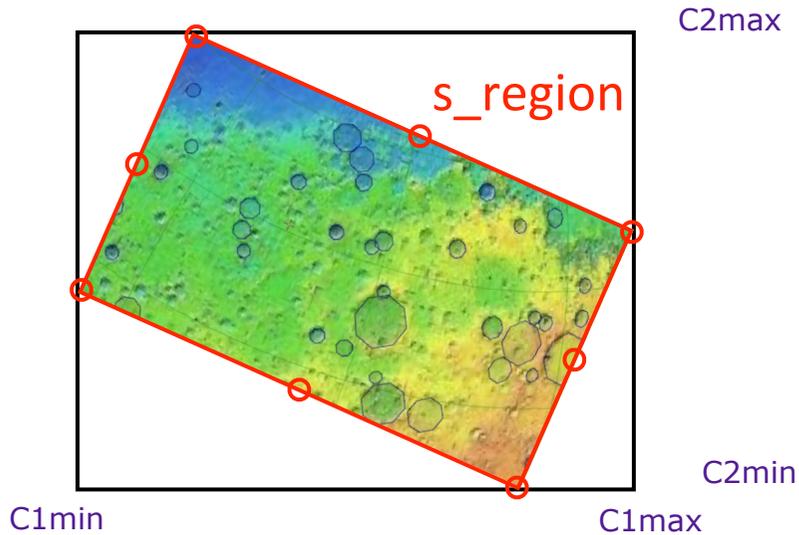

CRISM cubes on MOLA HiPS

Relies on IAU planetary coordinate frames (fits' WCS)

Aladin: using clever footprints

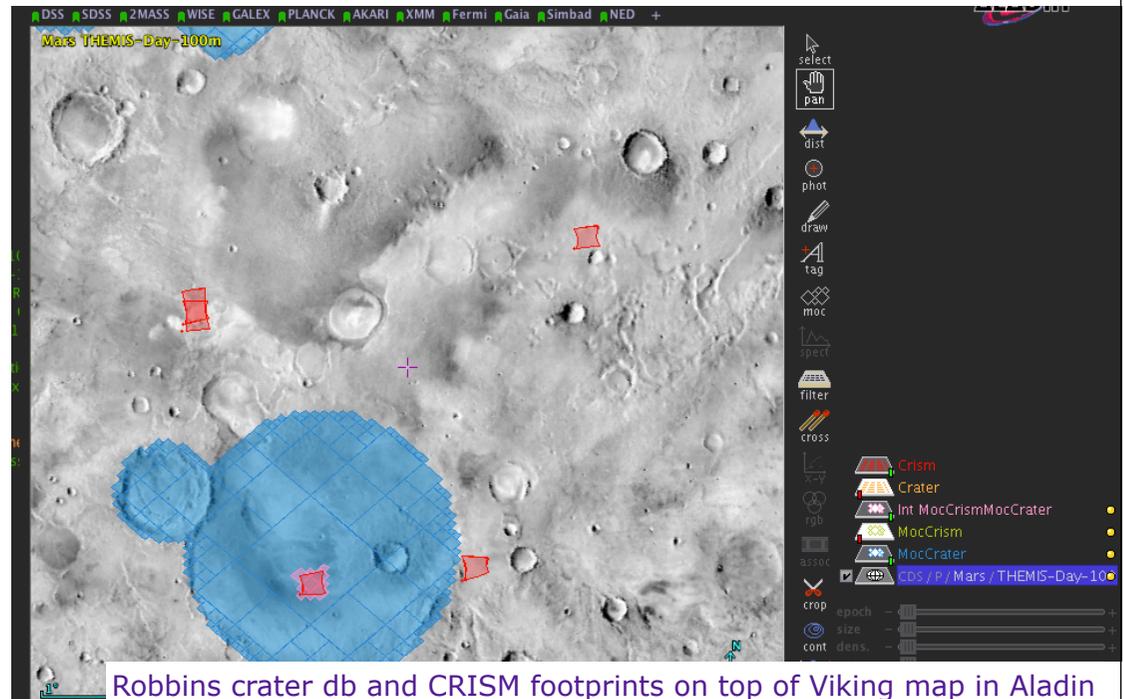

C1/C2 min/max coordinates
in body-fixed frame

- **PDS3-like limits** (lon/lat bounding box)
=> provide very rough estimate of footprint and many false alarms

- **pgsphere s_region** (sampling the contour)
=> provides much more accurate footprints with tunable resolution
+ allows very powerful searches on intersections, etc

- **MOC - Multi Order Coverages** (healpix-based)
=> Even quicker to compute and use. Can apply to entire datasets or individual files

Robbins crater db and CRISM footprints on top of Viking map in Aladin

New VESPA functions - multiscale images

Experimenting with:

1) Healpix in TOPCAT

2) HiPS in Aladin: multiresolution maps

Applications to HiRes mapping of planets

(very demanding) => Computed in advance, available on line

Currently includes 45 HiPS from a selection of USGS maps

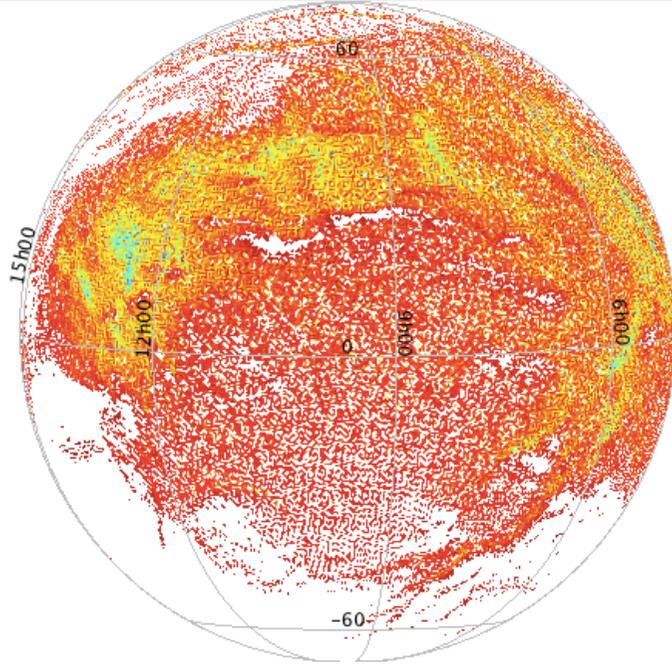

+ usage with panoramic images, TBC

3) MOC in Aladin: still another footprint format, quick and handy

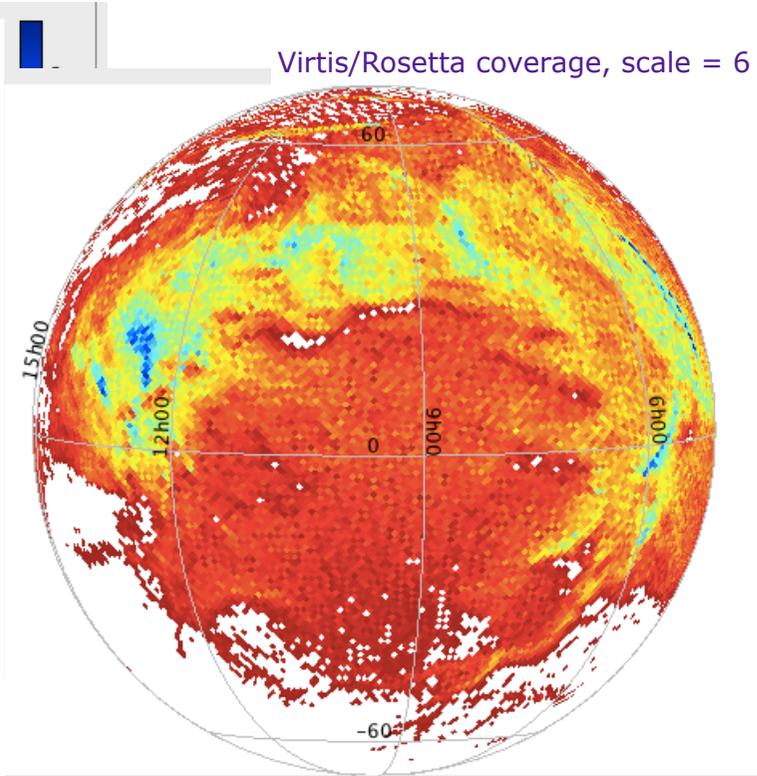

Applications to filter object catalogues, search intercepts, ROI definition, etc

New VESPA functions

Multiresolution maps in TOPCAT

Virtis/Rosetta coverage of 67P for a selected mission phase, scale = 7

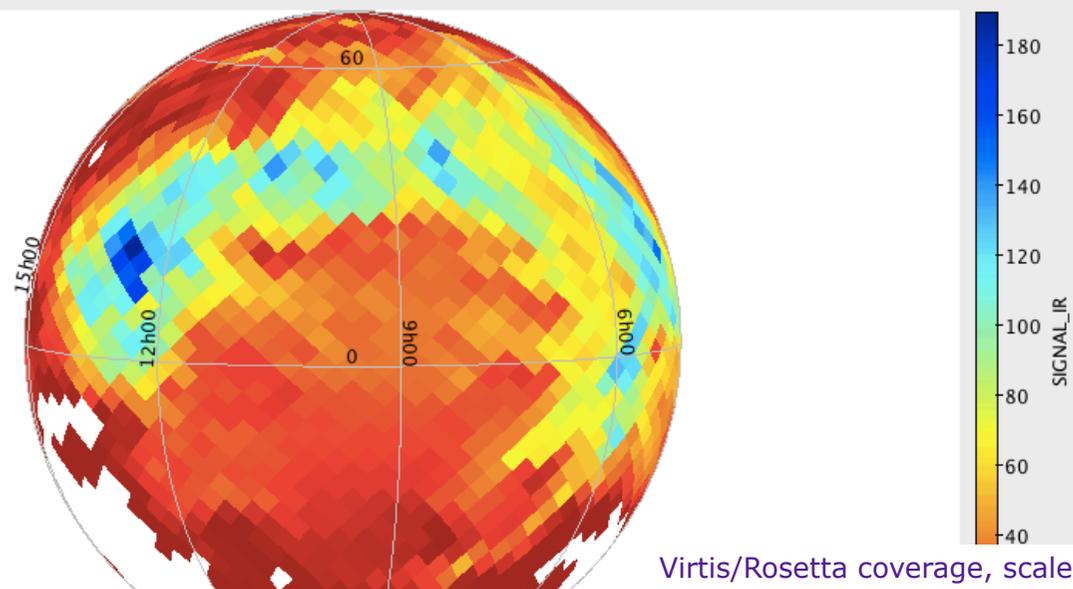

Virtis/Rosetta coverage, scale = 6

Start from a table of sparse observations (lon/lat)

VIRTIS/Rosetta on 67P

Integrate / average on healpix cells

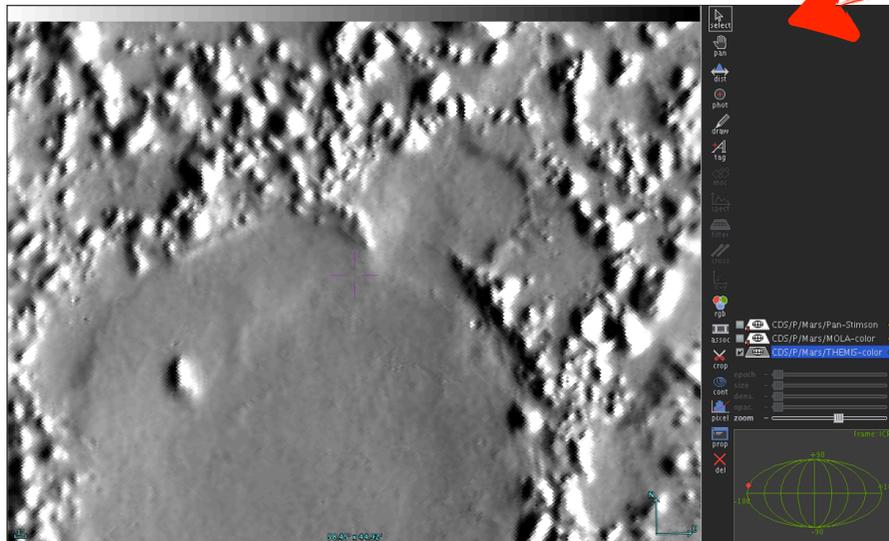

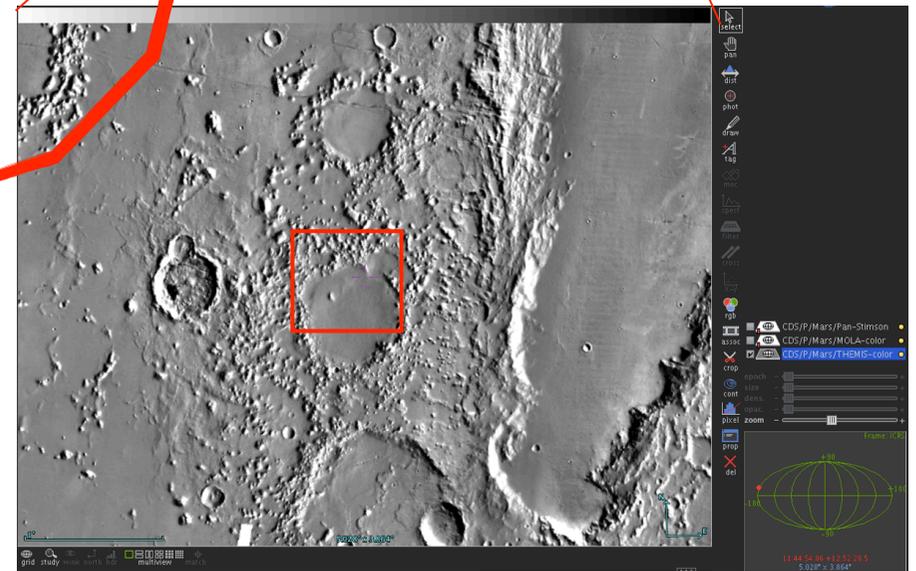

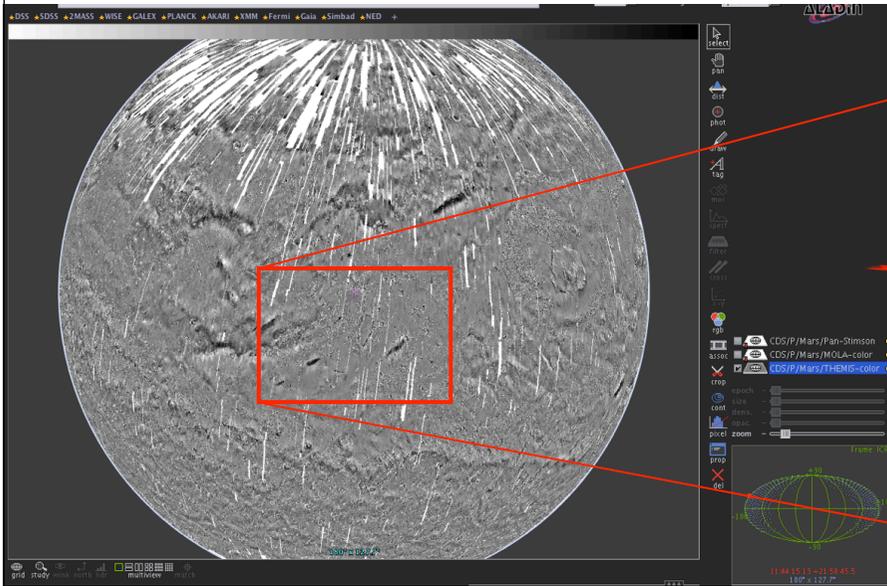

Modify resolution / scale on the fly

Virtis/Rosetta coverage, scale = 5

New VESPA functions

Multiresolution maps (HiPS) in Aladin

Currently 45 planetary HiPS available
(from USGS maps)

New VESPA functions

Multiresolution in Aladin: panoramic images

PIA20332Hips

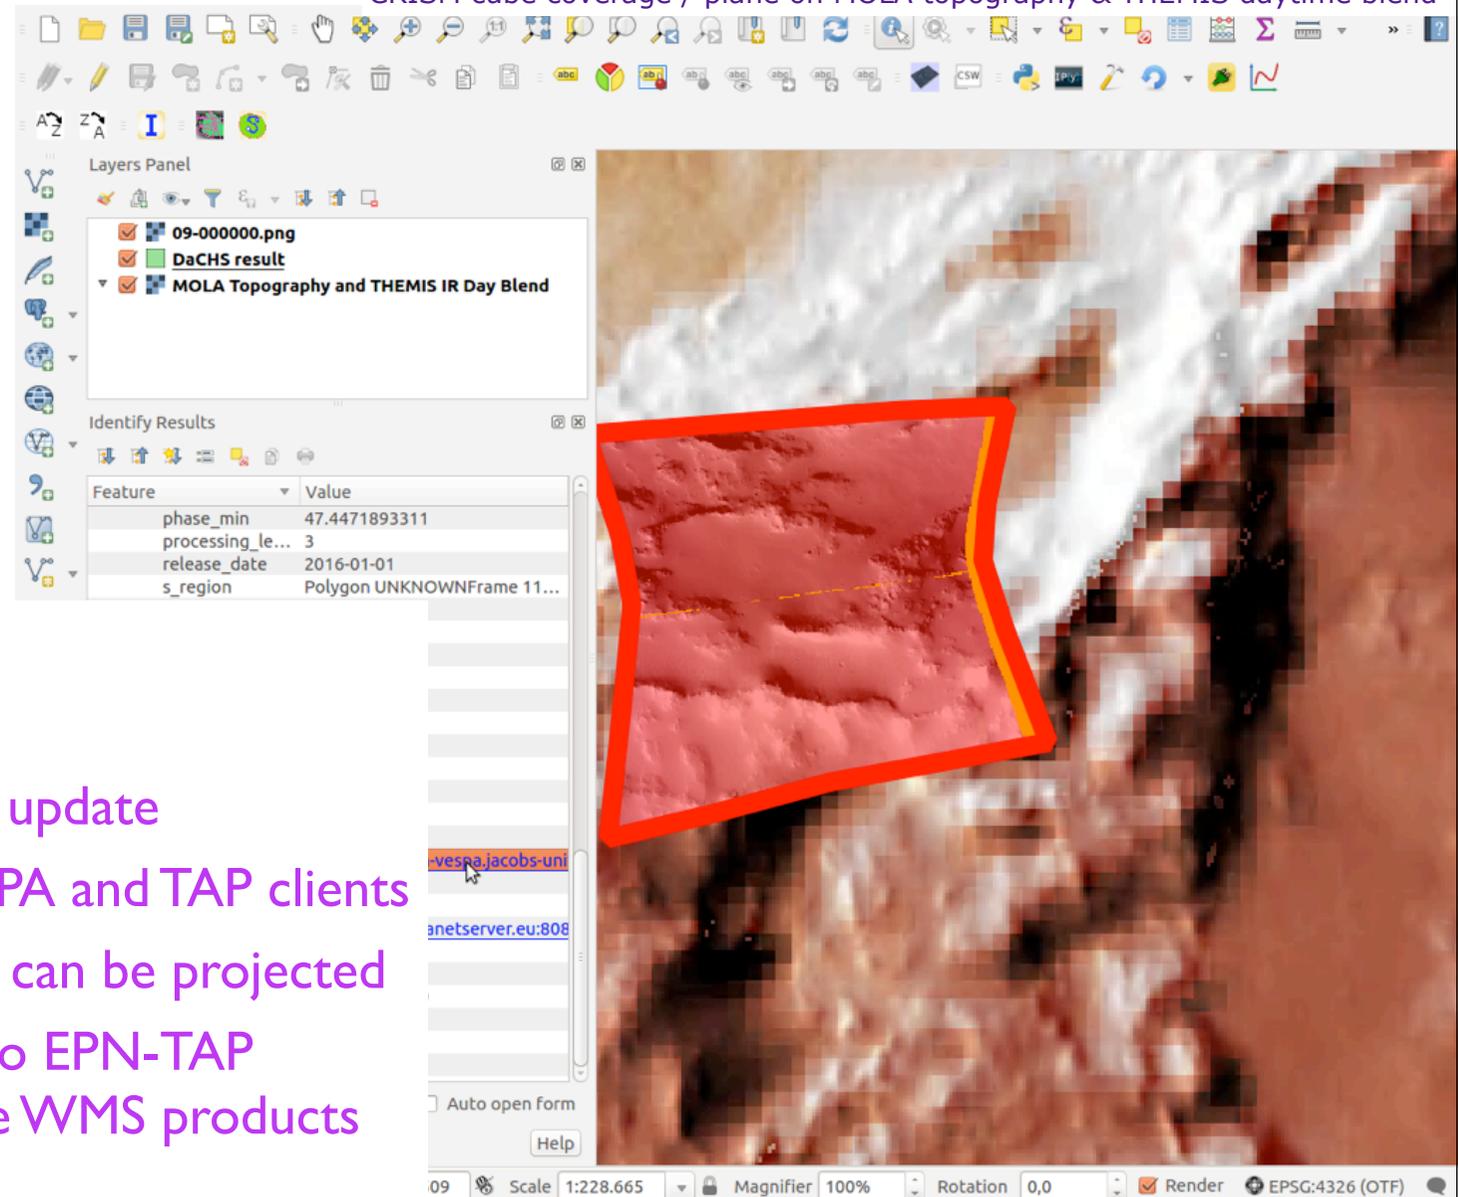

HiPS computed from a Curiosity MASTCAM panorama from JPL web site

PIA20332Hips

New VESPA tools: VO-GIS connection

CRISM cube coverage / plane on MOLA topography & THEMIS daytime blend

QGIS (open source):

SAMP plug-in installed

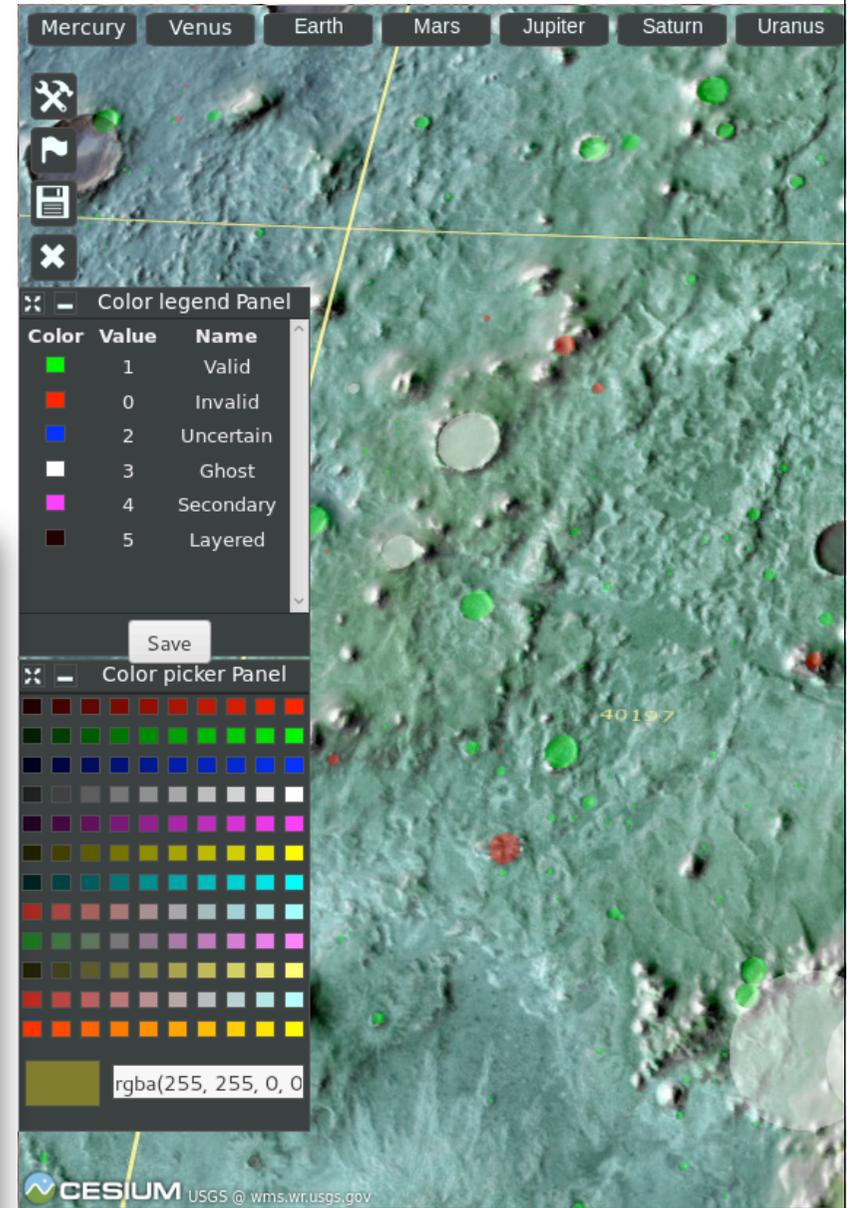

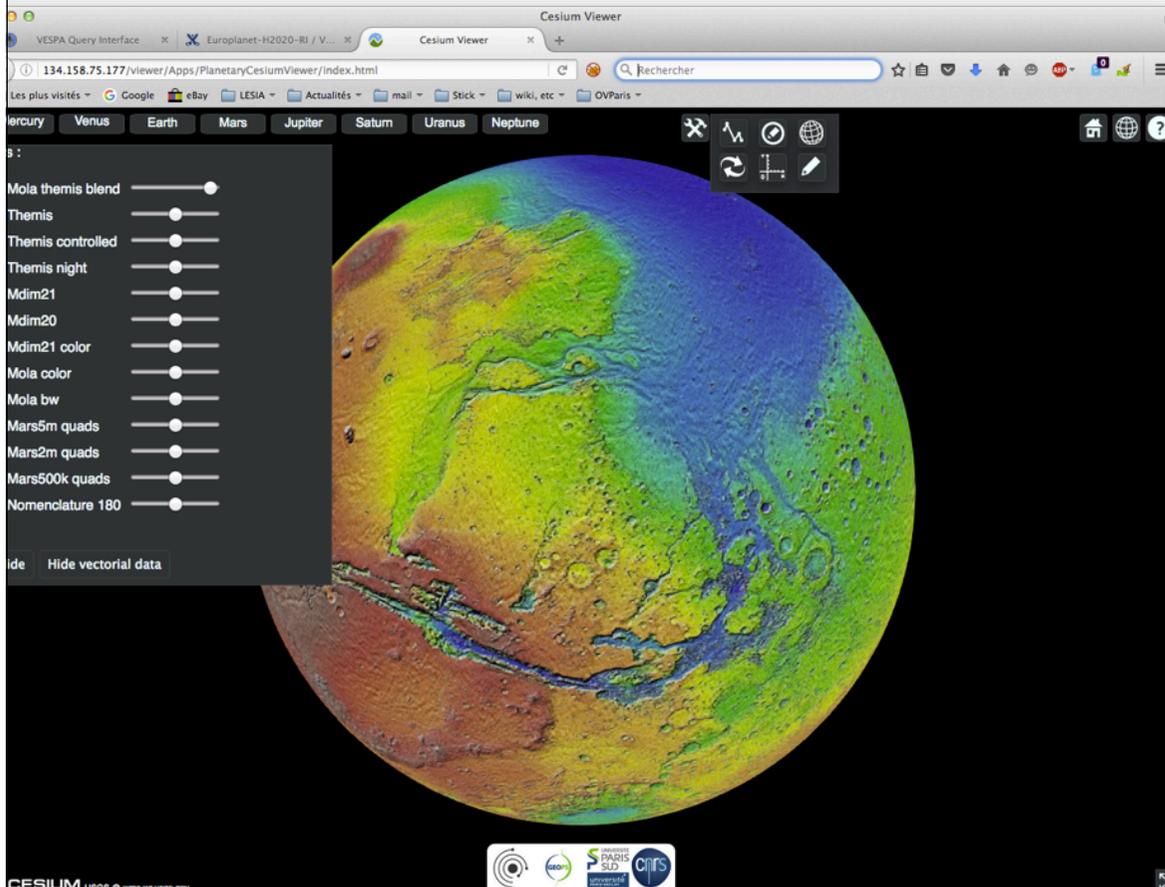

GEOfits format / GDAL update

- receives data from VESPA and TAP clients
- georeferenced fits files can be projected
- Provides visualization to EPN-TAP services which distribute WMS products

New VESPA tool

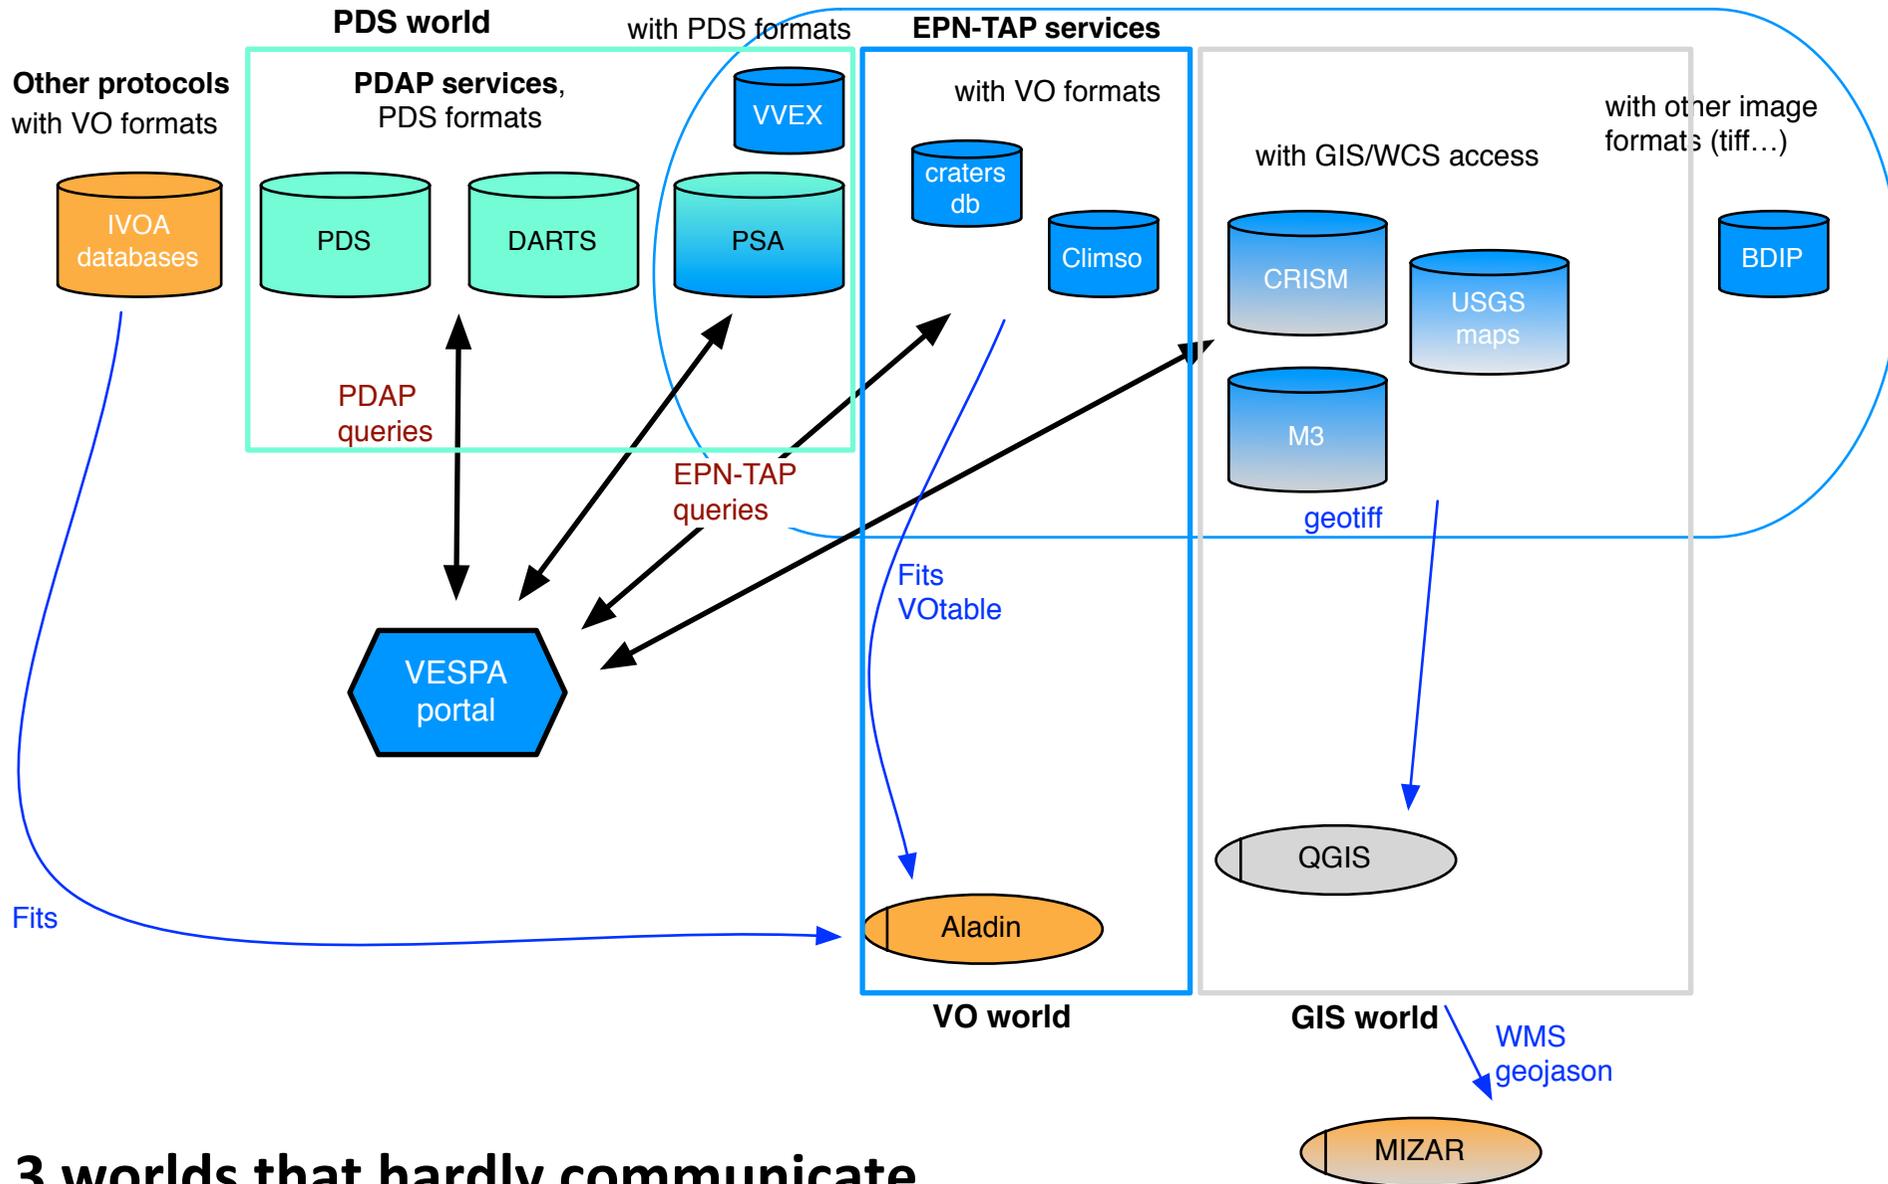

Planetary Cesium Viewer (GEOPS/CNRS)

- Quick multiresolution 3D visu
- Supports elliptic shapes
- Annotation/validation tool
- SAMP implementation

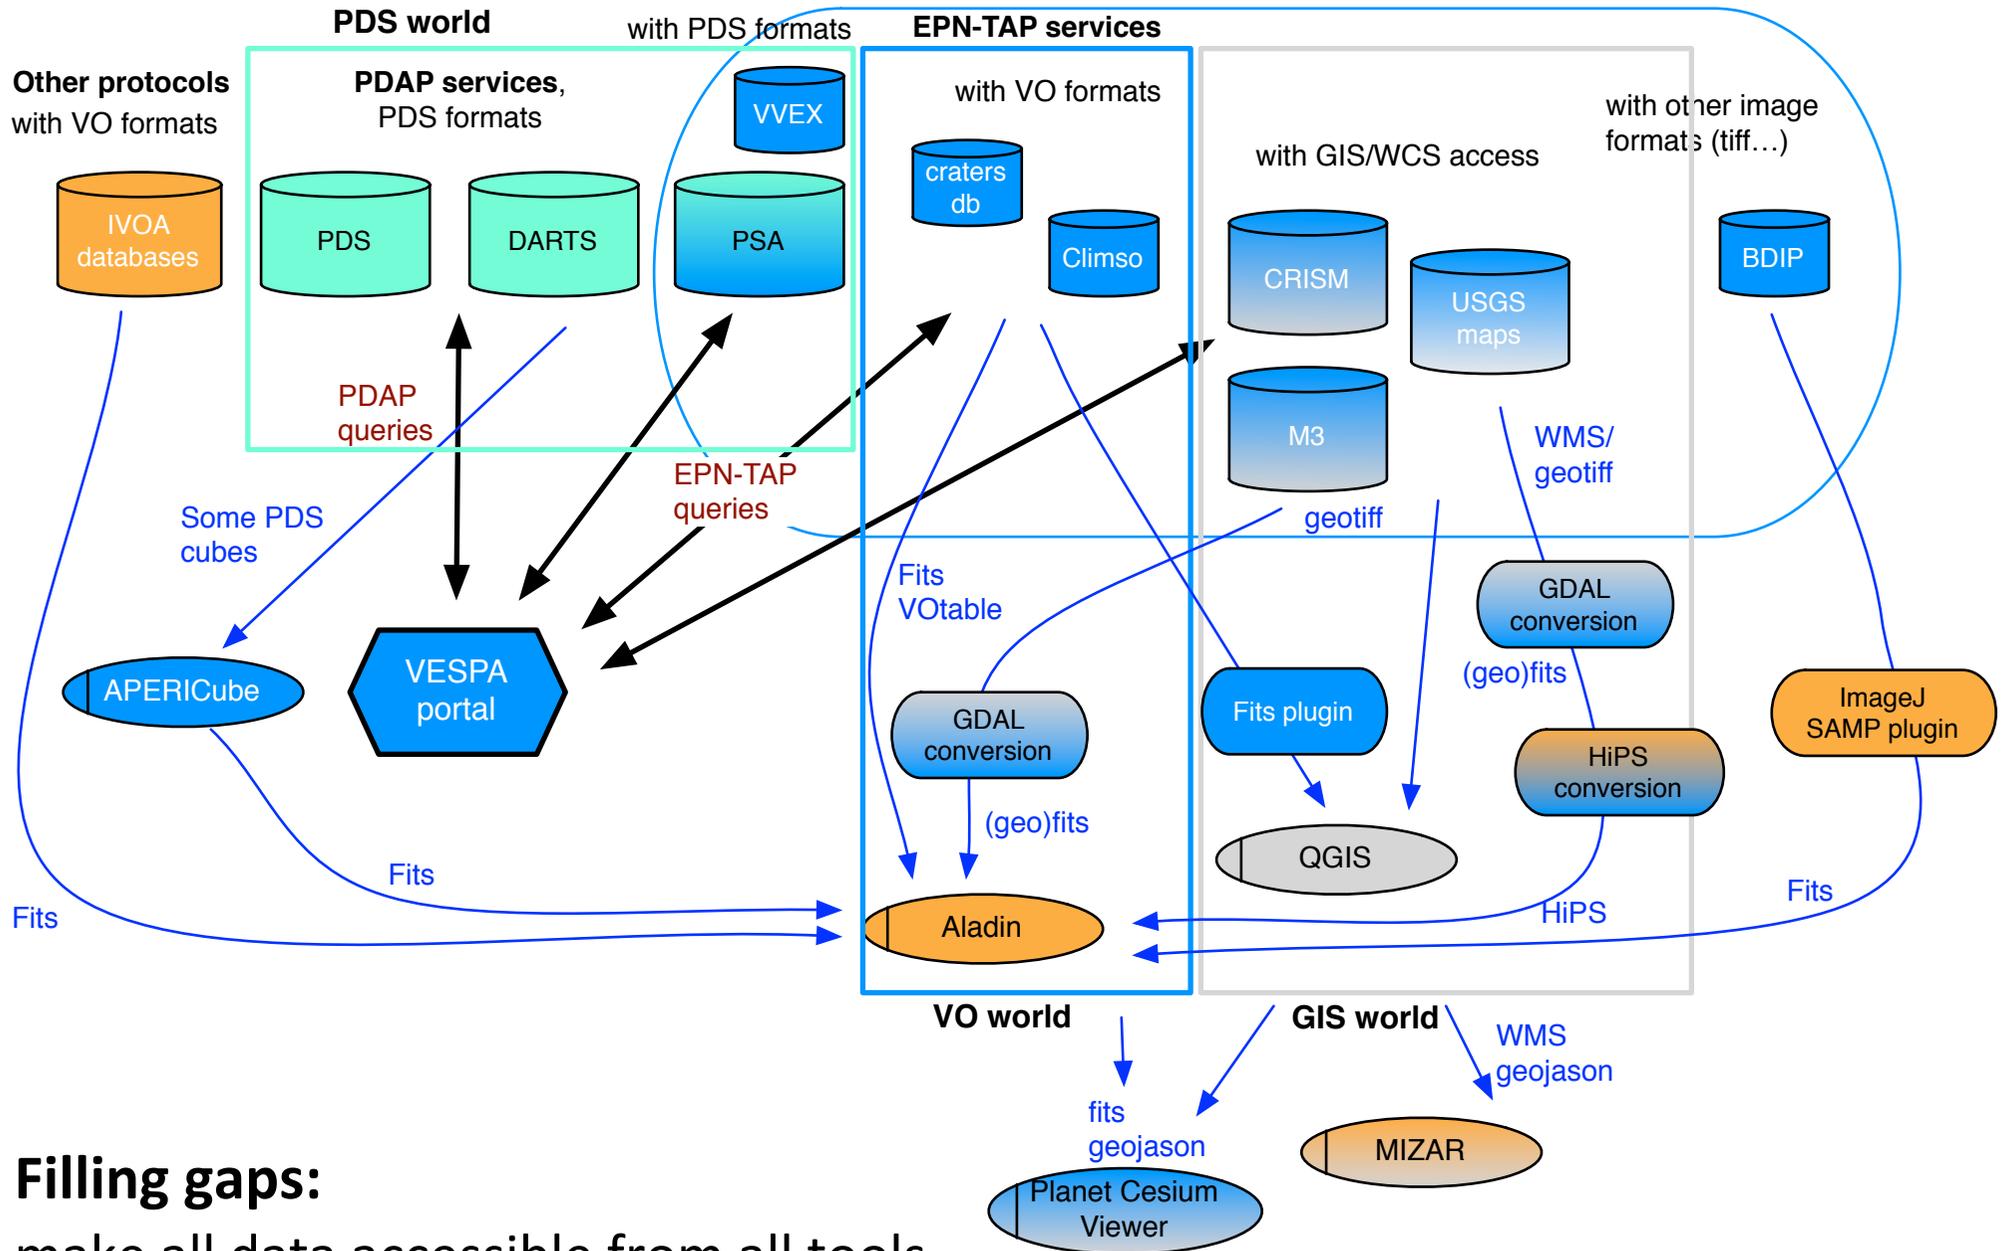

Robbins Mars craters database in PCV

Planetary images: data and tools

3 worlds that hardly communicate
but EPN-TAP allows for searches in data services

Planetary images: data and tools

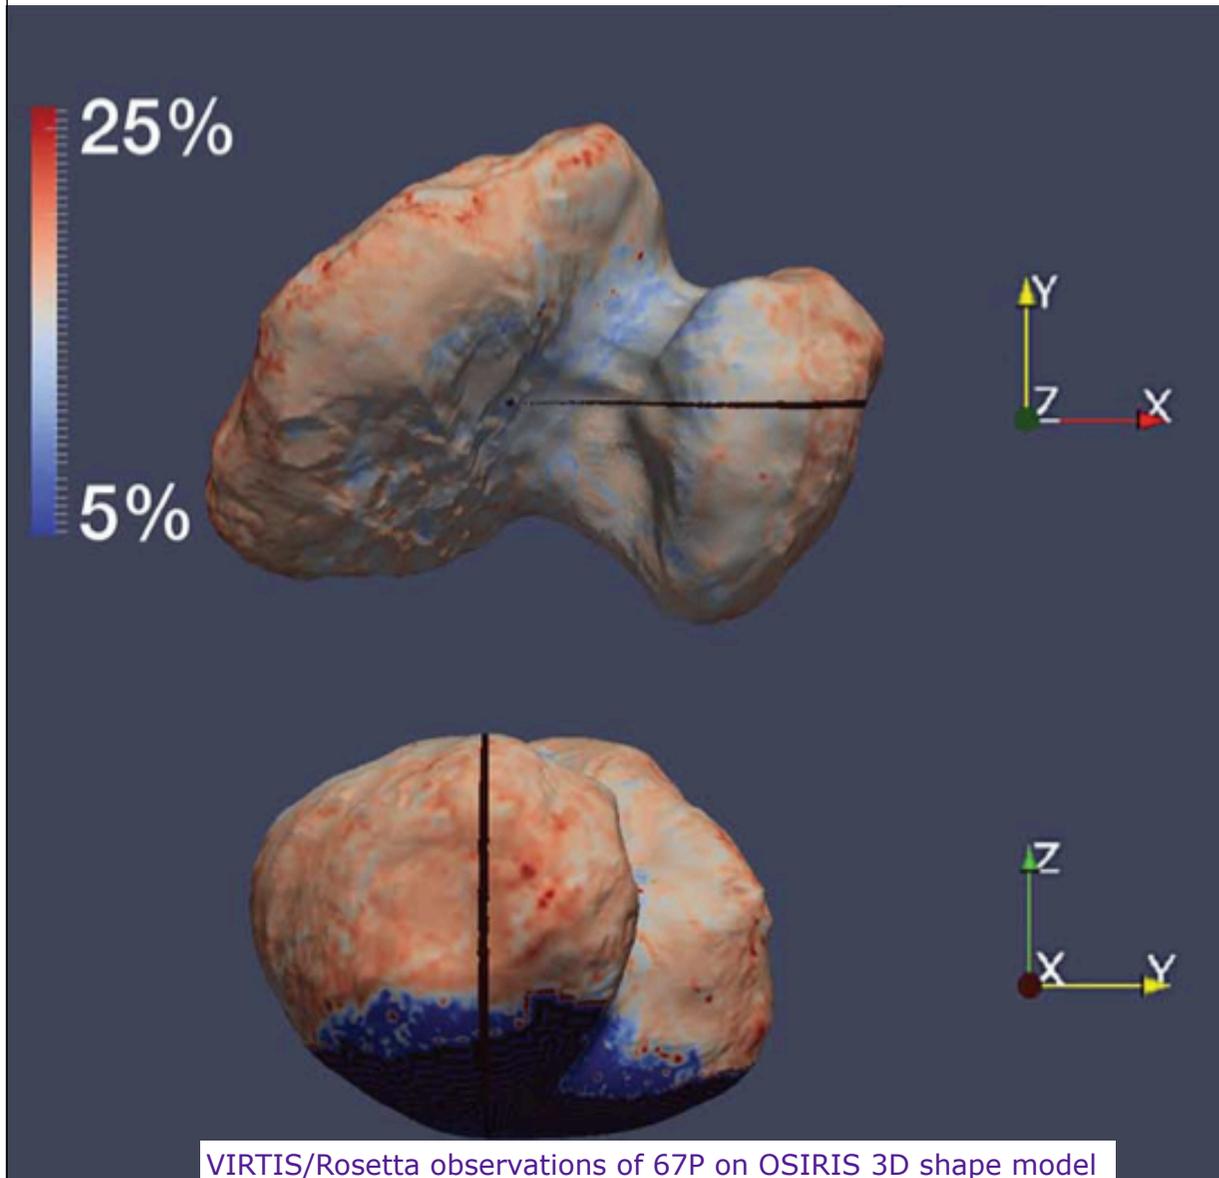

Filling gaps:
make all data accessible from all tools

Updated VESPA tools

MATISSE (ASI):

mapping on 3D shape models

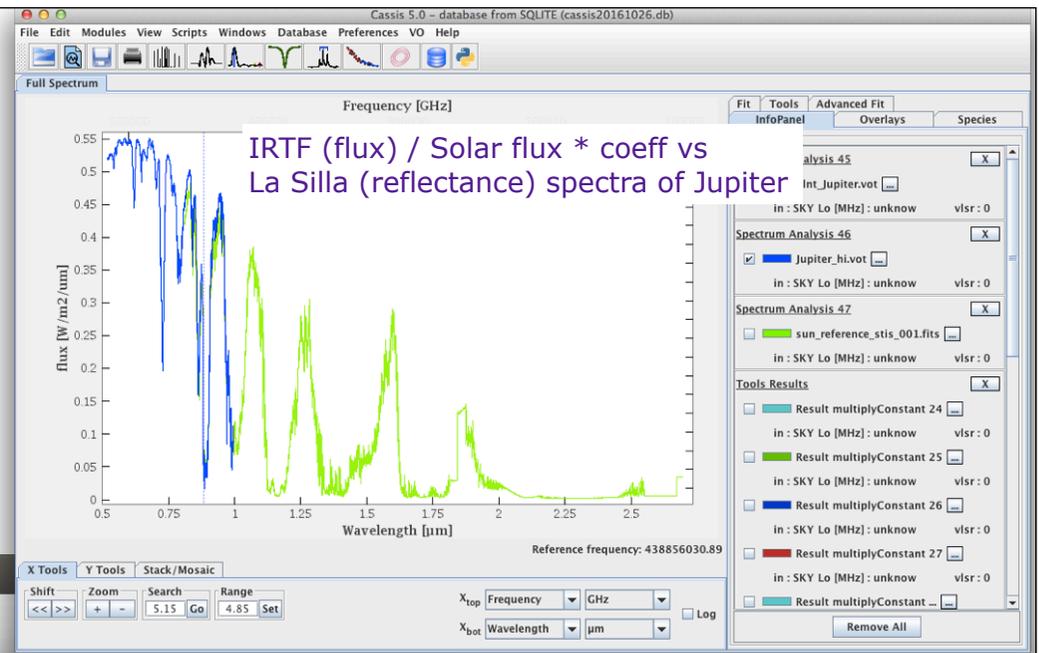

SAMP connection added

Updated VESPA tool

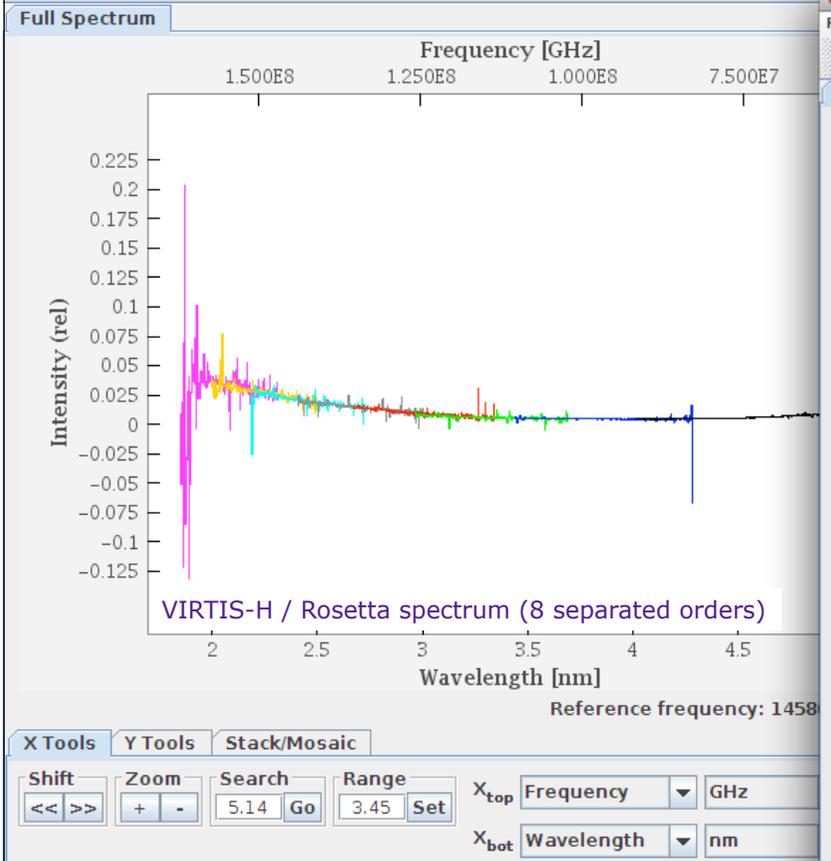

CASSIS v5 (IRAP/CNRS)

- Auto converts spectral axis & flux
- Support data in flux & various types of reflectance (scaling)
- Now supports multi-order spectra

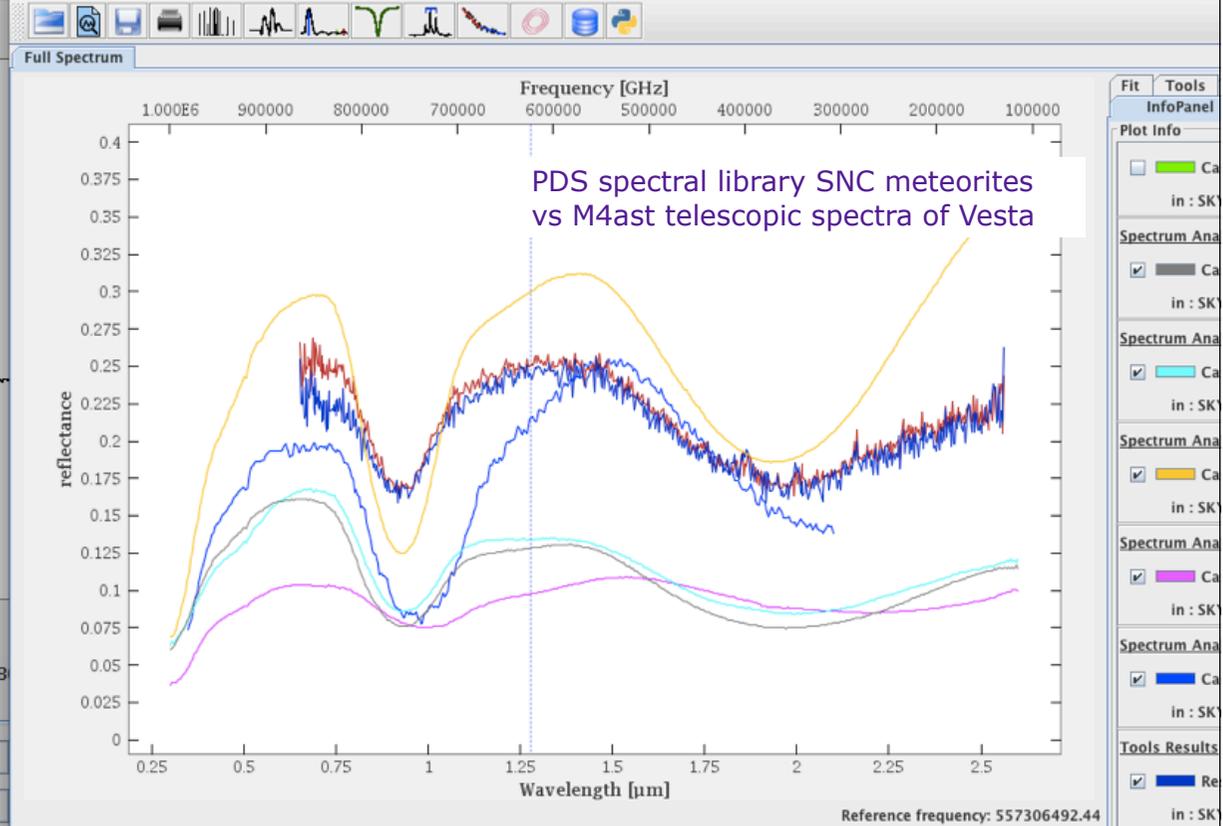

Cassid 4.3 beta - database from SQLITE (cassid120705.db)

File Edit Modules View Scripts Windows Database Preferences VO Help

Cassid 5.0 - database from SQLITE (cassid20161026.db)

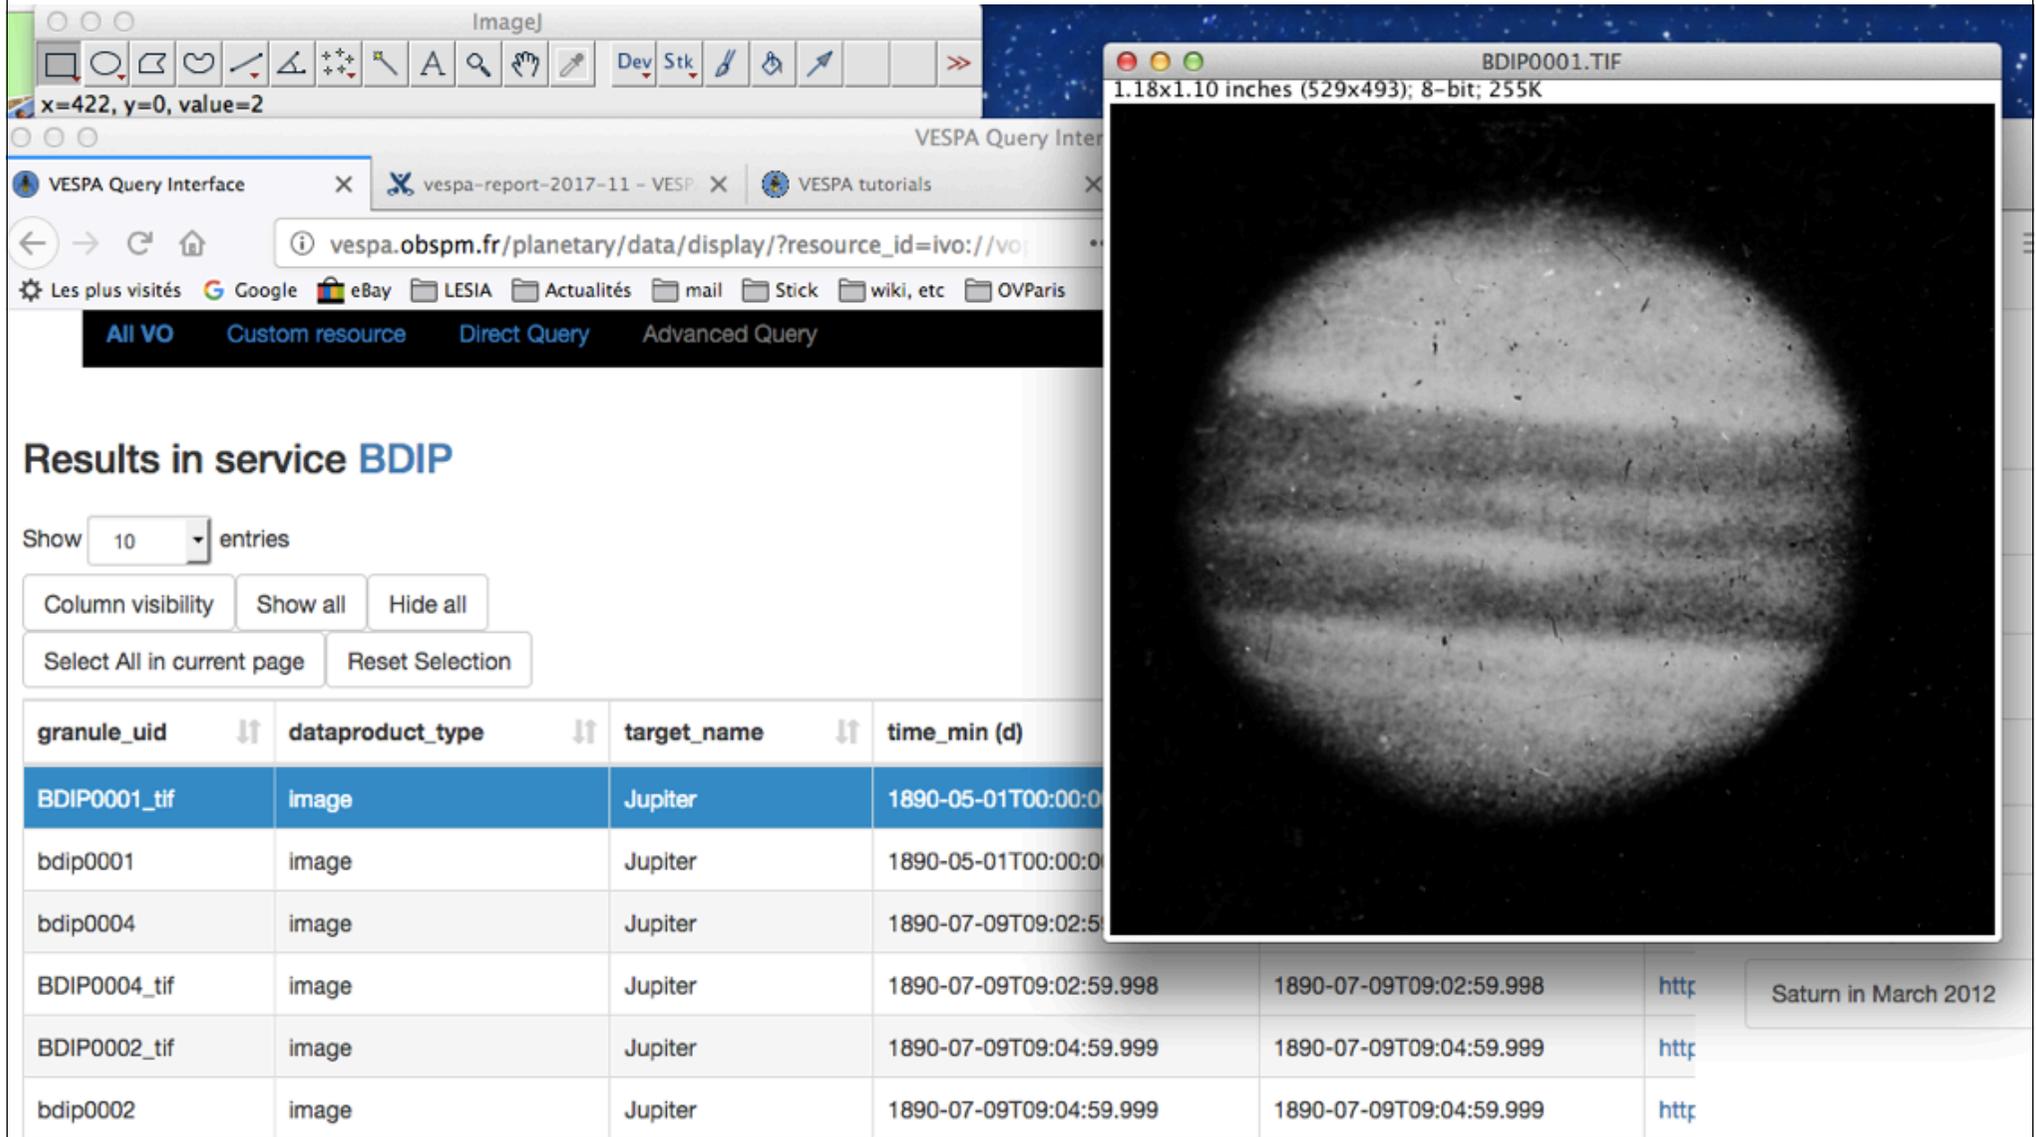

New tools in VESPA

ImageJ (open source):

- SAMP connection installed
- Provides support for unusual data types (TIFF...), format conversion, and image processing functions in the VO

Historical image of Jupiter from BDIP (tiff format) in ImageJ

The screenshot shows a web browser window displaying the VESPA Query Interface. The browser tabs include 'VESPA Query Interface', 'vespa-report-2017-11 - VESP', and 'VESPA tutorials'. The address bar shows the URL 'vespa.obspm.fr/planetary/data/display/?resource_id=ivo://vo...'. The page content includes a navigation bar with 'All VO', 'Custom resource', 'Direct Query', and 'Advanced Query'. Below this, the heading 'Results in service BDIP' is followed by a 'Show 10 entries' dropdown and buttons for 'Column visibility', 'Show all', 'Hide all', 'Select All in current page', and 'Reset Selection'. A table of results is displayed, with the first row highlighted in blue. The table has columns for 'granule_uid', 'dataproduct_type', 'target_name', and 'time_min (d)'. The first row contains 'BDIP0001_tif', 'image', 'Jupiter', and '1890-05-01T00:00:00'. To the right of the browser window, a window titled 'ImageJ' is open, displaying a grayscale image of Jupiter. The window title bar indicates the file name 'BDIP0001.TIF' and its dimensions '1.18x1.10 inches (529x493); 8-bit; 255K'. The image shows the characteristic bands of Jupiter.

granule_uid	dataproduct_type	target_name	time_min (d)
BDIP0001_tif	image	Jupiter	1890-05-01T00:00:00
bdip0001	image	Jupiter	1890-05-01T00:00:00
bdip0004	image	Jupiter	1890-07-09T09:02:59.998
BDIP0004_tif	image	Jupiter	1890-07-09T09:02:59.998
BDIP0002_tif	image	Jupiter	1890-07-09T09:04:59.999
bdip0002	image	Jupiter	1890-07-09T09:04:59.999

Next steps

- **More data services!** - including from external contributors
- **Process answers from multiple services**
- **Finalize VO-GIS interface** - including geofits
- **Develop interface with lab spectroscopy services**
(minerals and ices spectra, band lists, etc) - now 4 services implemented
- **Bridge EPNCore and PDS4**
- **Connect simulation services, use with related data services**
requires different protocols
- **Formalize docs / standards => submit to IPDA & IVOA**
and refine/complete tutorials
- **Longer term (> 2019) => extract knowledge from data:**
data processing, feature extraction, machine learning...
